

Email Outreach Automation

Description of user

Animal advocacy nonprofits that conduct outreach to companies and need a faster way to create personalized email drafts using existing research and message-generation tools.

What are they working towards

They want to streamline company outreach by combining existing company research, individual research, and personalized message creation into one repeatable workflow.

Summary of project

Build an open-source MVP that guides users from company selection to a personalized outreach email draft ready for human review.

Project Scope + Key Features & User Experience

The MVP should support:

- Entering a company target
- Pulling in company research using existing company research tool
- Pulling in individual research using existing individual research tool
- Generating a personalized outreach message
- Presenting the final email draft for review and copy/paste use

Out of scope for MVP:

- Automatic email sending
- Full campaign management
- Required Gmail integration
- Outreach to influencers, donors, or other non-company audiences

Use Cases & Business Rules

Primary use case:

- A nonprofit user wants to prepare a personalized outreach emails for a pressure campaign.

Business rules:

- Emails must be drafts only.
- A human must review before sending.
- Copy/paste output is acceptable for MVP.
- Gmail draft creation may be explored if complexity is manageable.

Security Requirements

Selected tier: **Medium**

Justification: The workflow may process company contact names, roles, email addresses, research notes, and personalized messaging. It does not send emails automaticall.

Tools and Resources

Existing tools:

- Company research tool
- Individual research tool
- Personalized message creation tool

Potential integrations:

- Gmail draft creation — optional
- Copy/paste email output — acceptable for MVP
